

The potential of open data in Poland

Katarzyna Patyrak

April 2024

Trends in Research Data

Open Data Sharing is an emerging priority for Funders, Publishers and Governments.
Why?

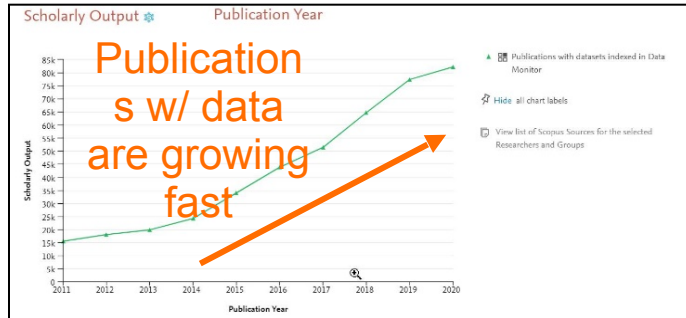

Open Data Sharing is seen as a fundamental component of responsible and effective research practices. It aims to:

- Promote Transparency and Reproducibility
- Accelerate Scientific Discovery
- Foster Innovation and Address Global Challenges

Open Data Sharing is an emerging priority for Funders, Publishers and Governments

“No opting out of RDM”

“If you regard research data as a reservoir to respond to crises, these data are the basis to create the knowledge that we need in future. Without data, you couldn’t define convincing responses to crises such as Coronavirus the climate crisis and the loss of biodiversity.”

Tracking research data helps institutions advance Open Data Sharing. How

- **Discoverability:** Facilitates easy search and access to relevant datasets
- **Attribution:** Ensures correct acknowledgement of data creators and contributors
- **Quality Assurance:** Enables assessment of data reliability and relevance
- **Interoperability:** Supports seamless integration of diverse datasets into research projects
- **Impact Assessment:** Provides insights into the usage and societal impact of open data
- **Compliance and Licensing:** Ensure Adherence to legal and ethical standards in data sharing
- **Long Term Preservation:** Facilitates documentation and archiving for sustained accessibility

Challenges in Tracking Research Data

What Do **Institutions** want to achieve?

Institutions want to advance their **Open Data** journey, by implementing:

Efficient research data tracking

Compliance view on funding requirements

Enrichment of reporting with research data

Promoting discoverability of research data

....but it all starts with the right resources to find and track their research data

Challenge: Where is the institutions' research data?

Funders recommend domain-specific repositories as good practice

“It is always recommended to refer to broadly recognized discipline-specific or certified repositories in the first place.”

But with up to 90% of research data deposited in these external repositories = challenge for institutions*

Institutions need efficient solutions to easily find and track their research data so they can:

- ✓ Maintain an overview of where data is deposited
- ✓ Support institutional policies
- ✓ Safeguard compliance with funder mandates

Research Data in Poland

Data Monitor helps institutions advance Open Data by tracking research data. The Process

How we track the Research Data

- **Harvest** metadata from 3000+ repositories including Figshare, DataCite
- **Normalize** metadata (OpenAIRE schema)
- **Clean-up** i.e. remove duplicates, versioning, non-research data e.g. articles
- **Enrich** metadata with publications/ author/ institutional linking

Data Monitor Corpus Access:

- via Webapp
- via Application Programming Interface (API)
 - Allows direct integration with Pure and other Current Research Information Systems (CRIS)

Academic impact of publications linked to data

Data Monitor helps institutions **advance Open Data** by tracking research data. How?

Data Monitor helps to solve for the following:

- ❖ tracking research data efficiently
- ❖ helping meet funders' compliance needs
- ❖ enriching reports
- ❖ promoting discoverability of research data

Data Monitor for enriching reports

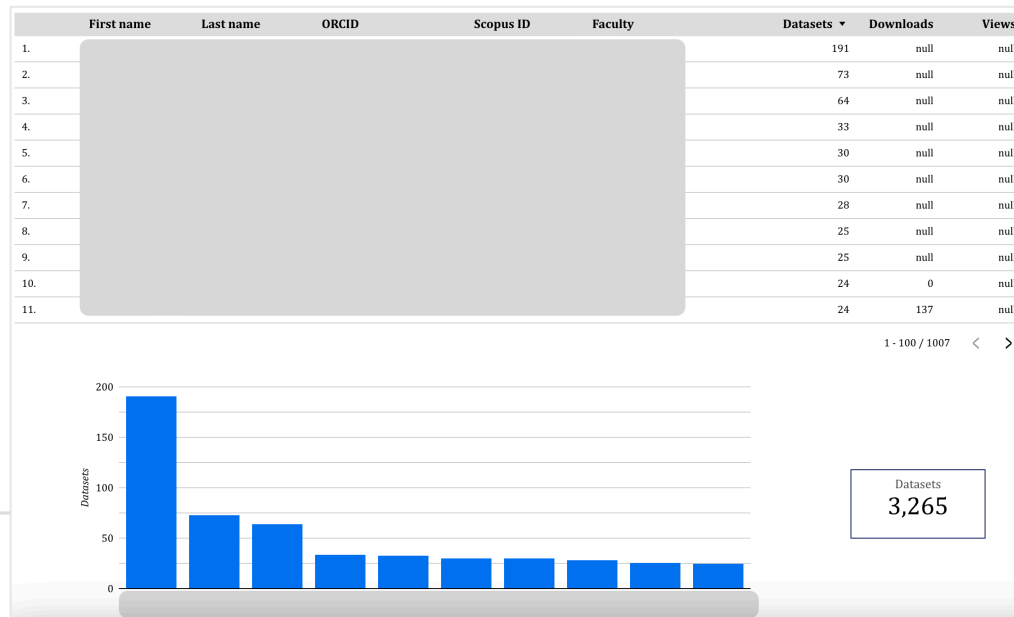

With access to **thousands of research datasets** from diverse repositories enables the ability to create report and give overview on **how researchers publish research data** in your organization

Ease of data export

The screenshot shows the Data Monitor interface with 2243 results. The 'Export' menu is highlighted, showing options for 'Data as CSV' and 'Data as JSON'. The search results table includes columns for Research data title, Authors, Repository, and Year.

Research data title	Authors	Repository	Year
Embedding entrepreneurship education in non-business courses: A systematic review and guidelines for practice	Crisan, Emil Lucian; Beletiu, Ioana Natalia; Salanță, Irina-Iulia; Bordean, Ovidiu	figshare SAGE Publications	2023
Additional file 6 of Maize cytolines as models to study the impact of different cytoplasms on gene expression under heat stress conditions	Ardelean, Ioana V.; Băiăcescu, Loredana; Sicora, Oana; Băiăcescu, Ovidiu; Mladin, Lia; Haș, Voichița; Miclăuș, Mihai	figshare Academic Research System	2023
A search for decays of the Higgs boson to invisible particles in events with a top-	Tumasyan A.; Adam W.; Andrejkovic J.W.;	HEPData	2023
